Proctor Academy's Environmental Mission is to teach and practice sustainability throughout our school community.

Sustainability is defined as "meeting the present generation needs without compromising our ability to meet the needs of future generations."

We strive to attain this goal by:

a) Attaining and sustaining a carbon-neutral footprint on campus.

b) Providing systems and services that encourage behavior, innovations, and technology that reduce our resource consumption.

c) Purchasing goods and services that are ecologically responsible.

d) Increasing organic, local, and healthful food choices each year.

e) Empowering current members of the community to be active stewards for an equitable and ecologically healthy earth.

f) Exploring the social, ecological and economic problems that confront us all, as well as the means to address those challenges on our campus and in our personal lives each day.
